

Illusion Delusions

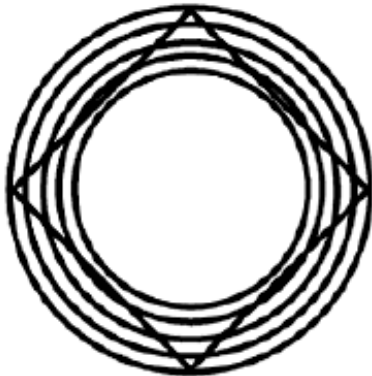

Your eyes can play tricks on you. These visual tricks are called Optical Illusions. Check out the following optical illusions, and let your eyes and mind wander and wonder.

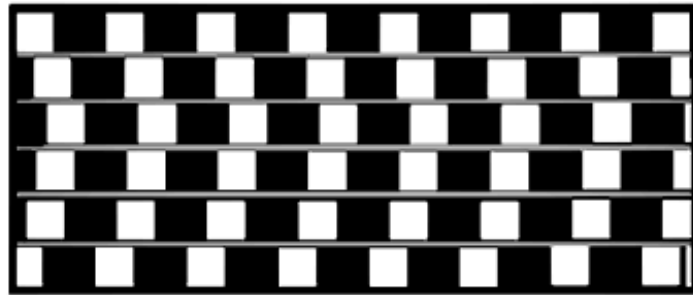

Which side of the box is the star on? Is it in the front or on the back of the box? Is it suspended in the middle?

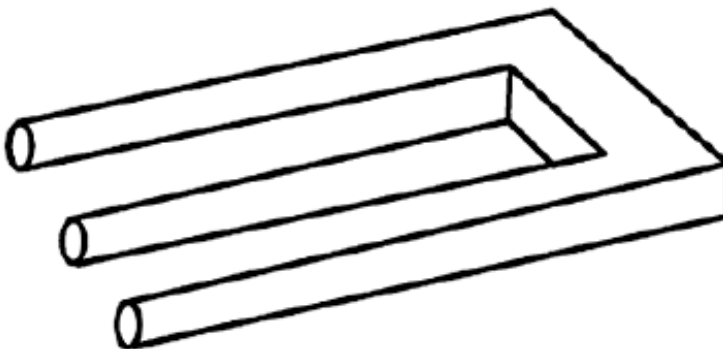

Which of these two curves is larger? The top curve or the bottom curve? Actually, both curves are the same size and length.

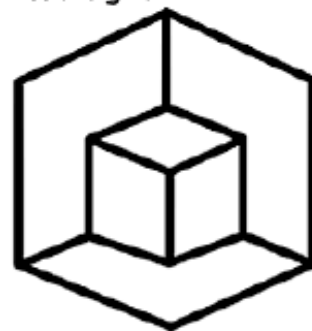

Is the square bent?

Are the grey lines straight?

Look at this again. How many prongs are there?

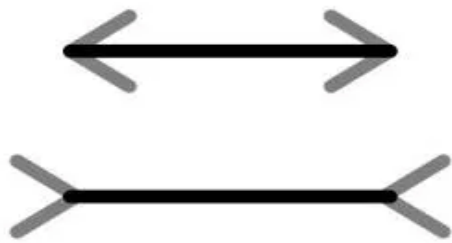

Is there a corner missing or is there a small box in front of a large box?

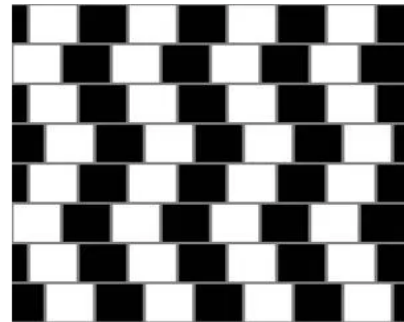

This alphabet is written from two perspectives, or sides. Can you tell the two perspectives?

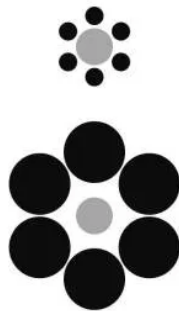

Check out these classic optical illusions.

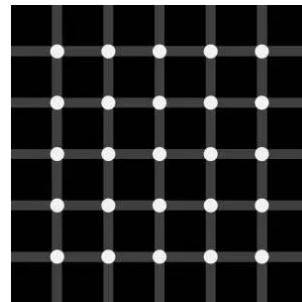

1. Which black line is longer? Top or Bottom?

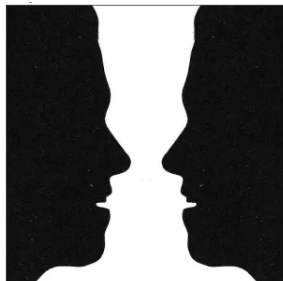

2. Are the rows even, or do they converge? (Do the horizontal lines come together?)

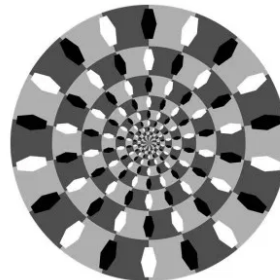

3. Which grey dot is bigger? Top or Bottom?

4. How many black dots are in this grid?

5. Do you see two people or a vase?

6. Can you see this design spin?
