

Exploring Triangles

Quick Review

► We can name triangles by the number of equal sides.

An **equilateral triangle** has 3 equal sides. It has three 60° angles. It has 3 lines of symmetry.

An **isosceles triangle** has 2 equal sides. It has 2 equal angles. It has 1 line of symmetry.

A **scalene triangle** has no equal sides, no equal angles, and no lines of symmetry.

Try These

1. Name each triangle as equilateral, isosceles, or scalene.

a)

b)

c)

d)

e)

f)

Practice

1. Write an S inside the triangles that are scalene.
Write an I inside the triangles that are isosceles.
Write an E inside the triangles that are equilateral.

2. a) Draw 3 different isosceles triangles.

- b) Draw 3 different equilateral triangles.

Stretch Your Thinking

Explain why it is not possible to make an equilateral triangle on a geoboard.

Naming and Sorting Triangles by Angles

Quick Review

An **acute triangle** has all angles less than 90° .

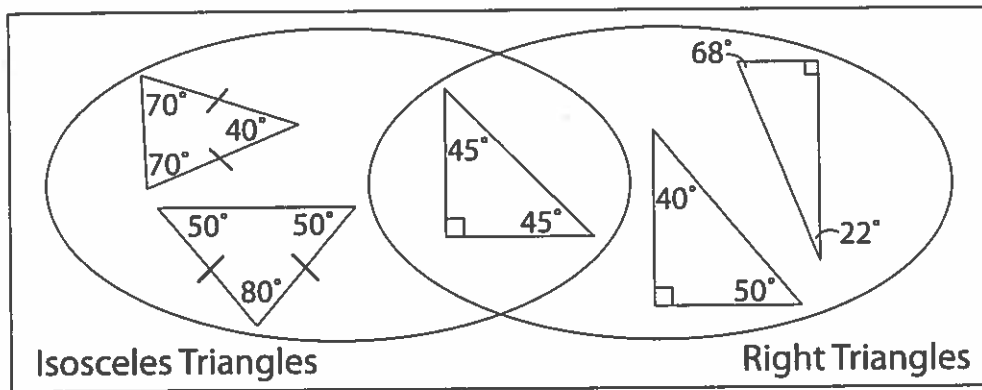

A **right triangle** has one 90° angle.

An **obtuse triangle** has one angle greater than 90° .

We can sort triangles in a Venn diagram.

Try These

1. Name each triangle as an acute, a right, or an obtuse triangle.

a)

b)

c)

2. Which triangle in question 1 is isosceles? How do you know?

Practice

1. Play this game with a partner.

You will need pencils and an open paper clip to use as a pointer.

- Player A spins the pointer and draws whichever triangle the pointer lands on.
- Player B takes a turn. Player B's triangle can touch, but not overlap.
- Continue taking turns. If you are unable to draw a triangle, you lose your turn.
- The last person to successfully draw a triangle is the winner.

Stretch Your Thinking

Can you draw each triangle?

- a) A triangle with an obtuse angle and 2 equal sides. _____
- b) A triangle with a right angle and no equal sides. _____
- c) A triangle with 3 acute angles and 2 of the angles are equal. _____
- d) A triangle with 3 right angles. _____
- e) A triangle with 3 equal sides and 1 obtuse angle. _____

Why was the store giving away batteries?

Solve the following problems in the sections below. Then record the corresponding letter of the correct answer in the rectangles at the bottom to answer the riddle.

Note: The problem numbers match the numbered rectangles.

Find the answer that describes each triangle:

- E** scalene
- O** isosceles
- B** equilateral

- R** scalene
- I** isosceles
- H** equilateral

- Y** scalene
- F** isosceles
- A** equilateral

- Z** scalene
- R** isosceles
- K** equilateral

- T** scalene
- S** isosceles
- A** equilateral

- G** scalene
- J** isosceles
- W** equilateral

⑦ I have angle measures 34° , 56° , and 90° . What kind of triangle am I?

- A** scalene
- L** isosceles
- P** equilateral

⑧ Each of my sides measures 54 yards, what kind of triangle am I?

- T** scalene
- P** isosceles
- F** equilateral

⑨ I have two sides that measure 14 mm and a third that measures 15 mm. What kind of triangle am I?

- T** scalene
- C** isosceles
- S** equilateral

- K** scalene
- G** isosceles
- L** equilateral

- E** scalene
- A** isosceles
- I** equilateral
